WSafe AI (WorkSafeAgent) + Procore — Integration Workflow

Data Connector app · camera hazard detection → human review → Procore Safety Observation → verify & close the loop

DRAFT · Planned design
Prototype stage · not yet deployed

Jobsite cameras

Axis cameras (VAPIX)

Existing site cameras stream video to WSafe AI.

Axis: TIPP member

\+

Genetec VMS

Video from the site's Genetec Security Center.

Integration in development

→

Camera ↔ location map

Admin maps each camera to a Procore project & location at install.

WSafe AI

1 · AI hazard detection

Flags candidates (e.g., missing PPE, person down) with snapshot, hazard type & suggested OSHA reference.

→

2 · Competent Person review

Human approves, edits or rejects. Rejected or unreviewed findings never leave WSafe AI.

→

3 · Publish approved finding

Only after approval: write via OAuth 2.0 Client Credentials (DMSA), least-privilege scopes.

→

5 · Verify on camera

Re-check after the fix; reviewer confirms, posts "after" photo.

Procore project (coming soon)

Read reference data

Projects, Directory (users/vendors), Locations, Observation types — read-only.

→

Safety Observation + Photo

Created with snapshot, location, hazard type, assignee & due date.

→

4 · Supervisor follow-up

Assignee fixes the hazard and responds in Procore's native Observations workflow.

→

Response Log / close

"After" photo + verification note recorded on the Observation. Optional: Incident / Near Miss draft for serious events.

↻ **Learning loop — "Every save teaches the next one."** Reviewer approvals, edits, rejections and verified fixes inside WSafe AI tune future detections. Procore data is never used to train AI models; Procore remains the system of record.

Human in the loop: no AI agent writes to Procore on its own; every write follows a person's approval.

Data minimization: only IDs/names needed for mapping & assignment; Procore-derived data deleted within 30 days of uninstall.

Status: planned design; concept prototype at wsafeai.github.io/wsafeai-procore-prototype (illustrative data). Patent pending (US 63/992,261).
